

AMENDMENTS TO THE CLAIMS

1. (currently amended) A pillow kit, comprising:
a cover assembly which includes substantially identical top and bottom portions, the top and bottom portions including spaced longitudinal sides and end sides, wherein the top and bottom portions are secured around the peripheries thereof except for one side;
means for selectively opening and closing said one side;
at least one chamber section located interiorly of the cover assembly;
~~loose~~ filling located ~~interiorly of~~ within the ~~cover assembly~~ the one chamber section; and
at least one core member, constructed to be insertable into and removable from the chamber section, for selectively changing the support characteristics of the pillow.
2. (original) The pillow kit of claim 1, including a plurality of chamber sections, and a plurality of inserts adapted for insertion therein.
3. (currently amended) The pillow kit of claim 2, wherein filling is located within all the chamber sections.
- 4 (original) The pillow kit of claim 2, wherein the chamber sections extend for substantially the entire length of the pillow.
5. (original) The pillow kit of claim 2, wherein the inserts have different support characteristics.
6. (currently amended) The pillow kit of claim ~~7~~ 5, wherein the different characteristics include differences in fill weight.
7. (currently amended) The pillow kit of claim 3, wherein ~~the outer layers of~~ the top and bottom portions each have an outer layer of cotton and an inner layer of polyester ~~are cotton, wherein the inner layers are polyester~~ and wherein the chamber sections are defined by polyester baffle members which extend between the inner layers of the top and bottom portions.
8. (original) The pillow kit of claim 1, wherein

the pillow filling is natural feathers and/or down.

9. (original) The pillow kit of claim 1, wherein the pillow filling is synthetic material.

10. (new) A pillow kit, comprising:

a cover assembly which includes substantially identical top and bottom portions, at least one of which has an outer layer and an inner layer, the top and bottom portions including spaced longitudinal sides and end sides, wherein the top and bottom portions are secured around the peripheries thereof except for one side;

means for selectively opening and closing said one side;

at least one chamber section located interiorly of the cover assembly,

loose filling located between the inner and outer layers of said at least one of the top and bottom portions of the cover assembly;

at least one core member constructed to be insertable into and removable from the chamber section for selectively changing the support characteristics of the pillow.

11. (new) The pillow kit of claim 10, including loose filling located in the chamber section.
